# MAVEN LIFE CYCLE
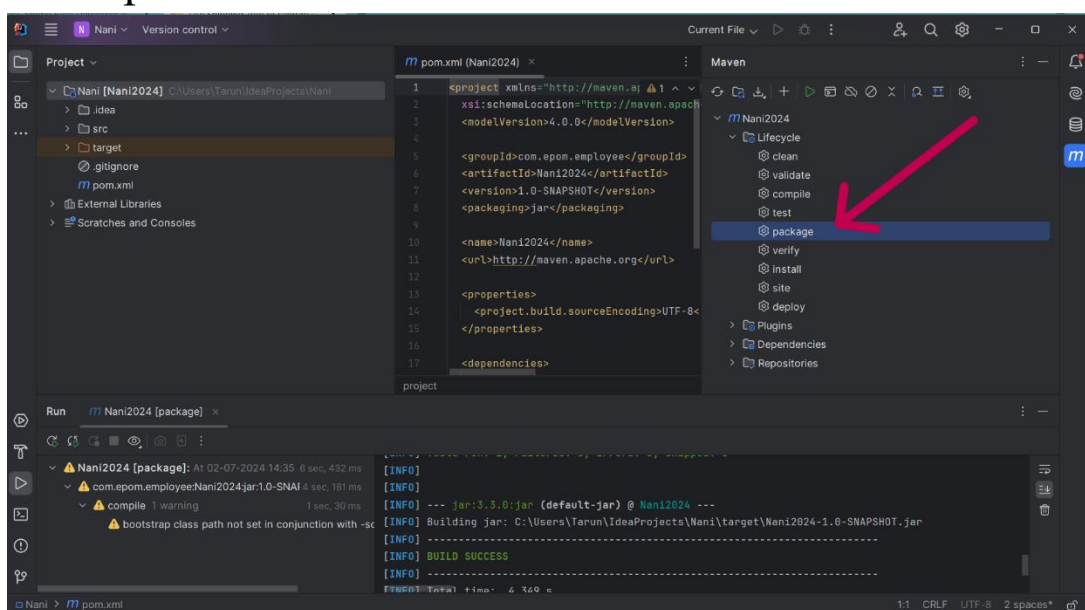

Step 1: create a project in IntelliJ

**Step 2:** fill all the group id, Artifact id, Version and click on create

Step 3: click on the clean option to clear the old running history

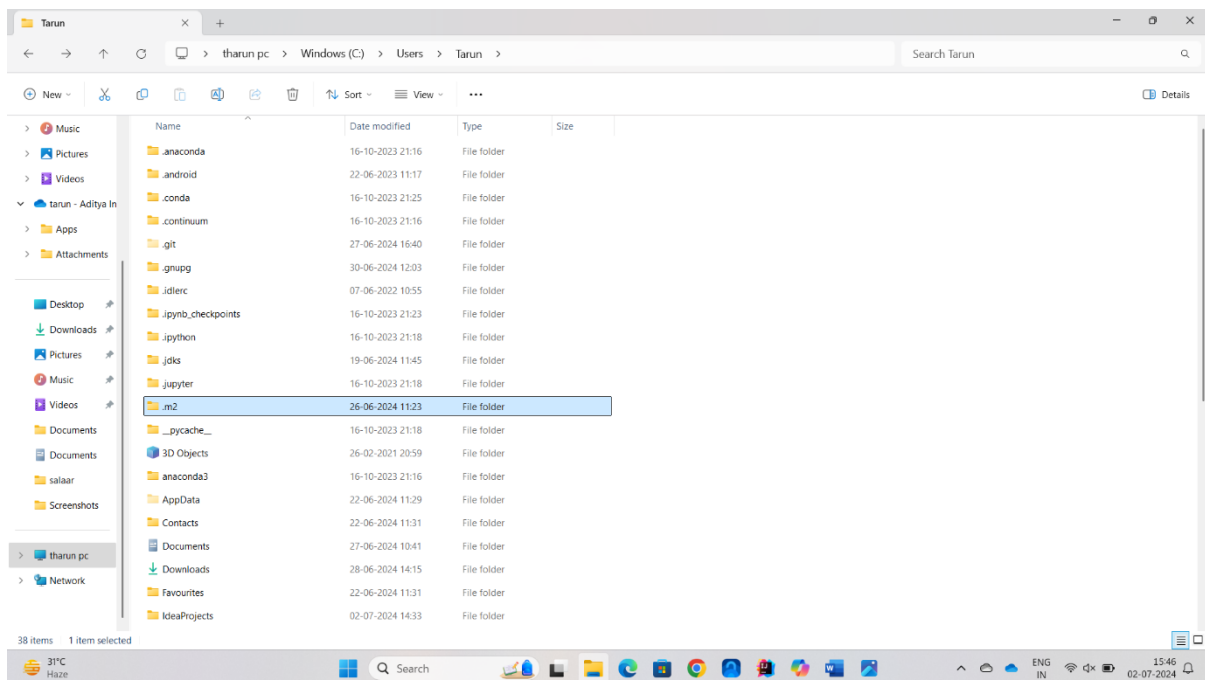

Step 4(Optional): Click on option package to specifies the type of artifact produces by your project that only happened in workspace
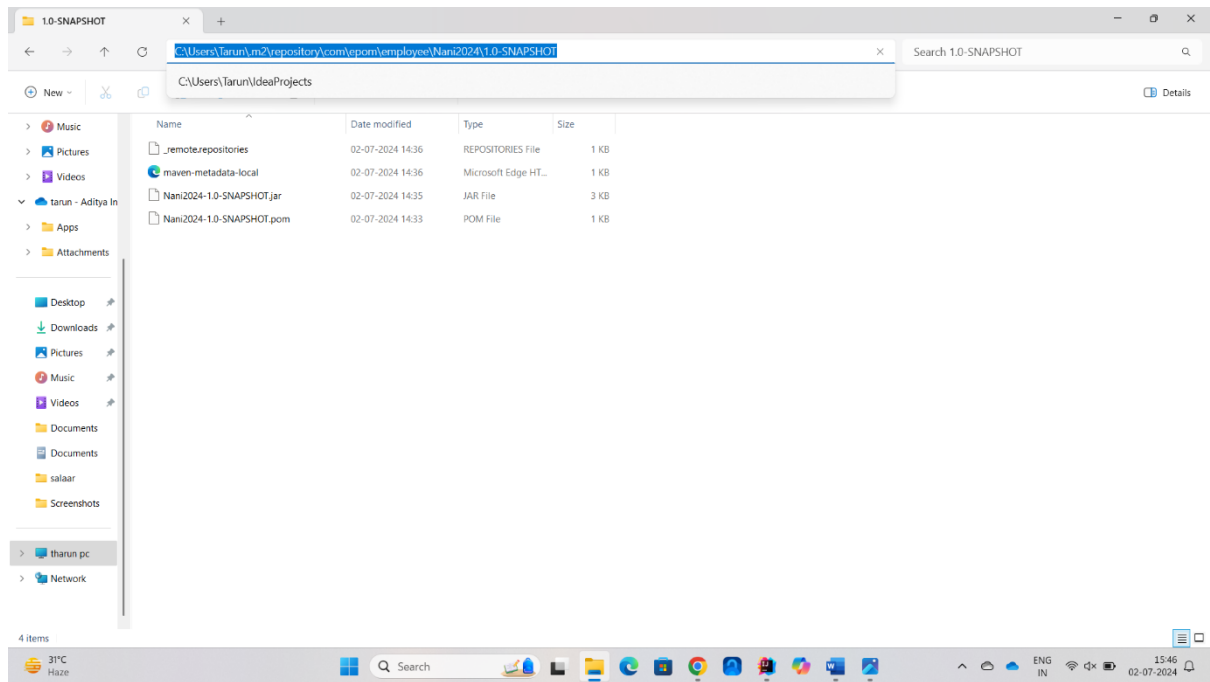

Step 5: select the option install to install the .jar file in local repository under .m2 folder

Here, We can see from the above image path is changed from target folder to .m2 folder

Here the Path is .m2 folder →repository→com(group id)→epam(group id)→employee(group id)→nani2024(artifact id)→version(1.0.0)→.jar folder
